

Relief Modular Valve

13 to 79 gpm
3600 to 5000 psi

Features

This modular relief valve provides maximum pressure control for a hydraulic circuit.

Wide ranging applicability Maximum Operating Pressure: 3600 to 5000 psi Pressure Adjustment Range: 115 to 3600, 5000.

Shockless unload, 2-pressure control, and other configurations are possible by switching the solenoid valve. Contact your agent for details.

• Handling

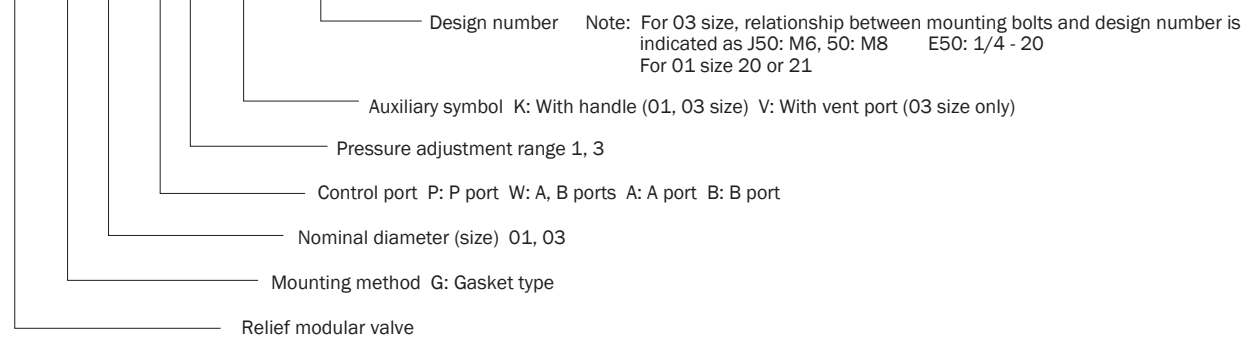

- When using a remote control valve in a vent circuit, certain vent circuit pipe capacities can cause vibration. Because of this, thick steel pipe with an inside diameter of .15 in that is no longer than three meters is recommended. Vent piping cannot be used with the 01 size. If a vent port is required for the 03 size, add the auxiliary code "V".
- For use as a safety valve, use a pressure override that is higher than the required circuit pressure.
- Make sure that tank port back pressure is no greater than 29 psi.
- A small control flow rate can cause pressure instability. Use a control flow rate that is in accordance with the values shown below.
 - 01 size: At least 1.3 gpm
 - 03 size: At least 2.1 gpm
 - 04 size: At least 2.1 gpm

For applications that require a flow rate that is less than the minimum flow rate, use an ORD-G** direct type relieve modular valve.
- Note that a sub plate and installation bolts are not included. See pages H4 or F-87-89 if these items are required.
- 04 series modular valves do not have an L (DR drain port, so they cannot be used in combination with pressure center type solenoid valves (D).
- Connect OR-G03-W*-(J) 50 to the two T-ports on the tanks.
